AMENDMENTS TO THE SPECIFICATION

IN THE SPECIFICATION:

Please amend the paragraph beginning on page 11, line 9 as follows:

-- In the present invention, the base station is equal to a wireless access point, but the

present invention is not limited to this aspect. Some wireless access providers use their own

network, including interconnected access points, and share one base station or access point to

connect it to the core network. An important concept of the present structure is a degree of

simplification required to implement an inexpensive network. The concept of CCN and separate

independent BAN offers providers of wireless services the possibility to setup an infrastructure

with little investments. New providers can easily connect to the core network, provided that they

use the correct interface.--
